

Problems:

1. Create a program that allows the user to enter 3 test scores, validate it to be greater than 0 but no greater than 100. After all the entries, print the average of the 3 scores.
2. Allow the user to enter an int number until they enter a 9999. The input cannot be less than 0 or greater than 50. At the end, display the total.
3. Allow the user to enter an int number and then print that number of rows and columns of *.
 - a. For instance, if I entered a 3, I would print a box of *

Remember that we will also have a function on this exam. I will do one on the video.
